D. WILLINGNESS TO PAY FOR A GRID CONNECTION

Respondent should be most knowledgeable member on household electricity.

For each household, please randomly assign one of the six following amounts in the placeholder 1,900 Birr: 0% of the connection fee in Birr and respectively 14%, 29%, 43%, 57%, 71%, 100%. –

D.1	Interviewer/CAPI check: Is the household connected to the national grid?		Yes.....1→E No.....2
D.2	Enumerator: Record Respondent ID for this section	<input type="text"/>	Individual ID from Household Roster

Electricity requires several types of payments. There are three parts to the cost of electricity: connection, wiring, and monthly use. In other words, to use electricity you need to have a wire from a meter in your house to the pole first. That is the connection. You also need to have wires to connect appliances within your house to the meter. This is the wiring. Finally, to keep using electricity you must pay for what is used and measured by the meter, or it will be turned off, this is the cost of monthly use. I would like to ask you questions only about the first cost of connecting – getting a wire from the electricity poles to a meter on your house.

If you could pay a “lump sum” price for an electricity connection. In other words, you are offered a price and a period of time to decide whether to take this price. If you decide to take the price, you have to pay all at once, after which you are immediately connected. As you answer the next few questions, assume that all other wiring fees and monthly service fees for using electricity, once you have the connection, remain the same as they are now.

D.3	Would you be willing to pay 1,900 Birr for an electricity connection?		Yes.....1→D.12 No.....2
D.4	Would you be willing to pay 1,900 Birr for an electricity connection, if you were given 3 months to make the payment? This means that each month you will pay 633 Birr (1,900/3) per month for 3 months.		Yes.....1→D.12 No.....2

K. WILLINGNESS TO PAY FOR AN IMPROVED COOKSTOVE

In this module CAPI will identify the currently used cookstove, and will prompt the question relative to the next best option. The respondent should be the household member who decides to purchase the cookstove in I.31 OR the household member who most frequently cooks food for the household, as identified in A.12

In this module there are two sub-sections: one on cookstove for cooking (K.1) and the other on cookstove for baking (Injera) (K.10).

Cookstove for cooking (sauce, coffee, etc.)

This cookstove is used typically every day.

For each household, determine whether the primary stove is traditional three-stone stove, charcoal stove or neither (based on responses in Section I). Then, randomly assign one of the following improved stoves for cooking:

- *To traditional three-stone stove user we ask the WTP for (1) a biomass improved stove, (2) a regular charcoal stove, (3) an improved charcoal stove (Laketch) or (4) kerosenestove available in the local market.*
- *To regular charcoal stove user we ask the WTP for (1) an improved charcoal stove (Laketch) or (2) kerosene stove available in the local market.*
- *To improved charcoal stove (Laketch) user we ask the WTP for (1) kerosene available in the local market.*

Please, show the picture of the improved charcoal stove (Laketch) to the respondent.

Of course, if the household already has a kerosene or an electric/LPG stove, please skip this question.

(After a type of improved cookstove is randomly chosen, the price of this type of cookstove will be assigned based on one of the three percentages of the reference price: 33%, 66% or 100%.)

K.1	<i>CAPI/ Enumerator:</i> Recall responses to Section I (USE OF COOKING AND BAKING SOLUTIONS) from the type column and record the main stove used for cooking: three-stone/traditional, charcoal, kerosene, electric/LPG (in these last cases skip to the next section). Read options aloud		HH uses three-stone/traditional stove.....1 HH uses charcoal stove2 HH uses kerosene stove3 → (Skip to K10) HH uses electric/LPG stove4 → (Skip to K10) HH does not use any stove for cooking.....5 → (Skip to K10)
K.2	<i>Enumerator:</i> Record Respondent ID for this section		Individual ID from Household Roster
Interview: <i>Please, describe and explain the benefit of having ICS and the features of the assigned cookstove for cooking. If you could pay a “lump sum” price for this cookstove. This cookstove can reduce the smoke and fuel consumption significantly. Possibly, your cooking time per meal will be shortened since firepower of this cookstove is stronger than the traditional cookstove. As you answer the next few questions, keep in mind the various benefits from this device as well as your household budget.</i>			
K.3	Would you be willing to purchase this cookstove for cooking at [CAPI: Price] Now/ today?		Yes.....1 → K.10 No.....2
K.4	Would you be willing to pay \${CF} for this stove, if you were given 6 months to make the payment? This means that each month you will pay \${CF/6} per month for 6 months.		Yes.....1 → K.10 No.....2
K.5	Why would you not accept the offer? (Cannot afford the payment.....1 Do not need an improved cookstove.....2 Fuel for this stove is unreliable....3 Other, specify.....555
K.6	Would you be willing to pay \${CF} for this stove, if you were given 12 months to make the payment? This means that each month you will pay \${CF/12} per month for 12 months.		Yes.....1 → K.10 No.....2
K.7	Why would you not accept the offer? (Cannot afford the payment.....1 Do not need an improved cookstove.....2 Fuel for this stove is unreliable....3 Other, specify.....555
K.8	Would you be willing to pay \${CF} for this stove, if you were given 24 months to make the payment? This means that each month you will pay \${CF/24} per month for 24 months.		Yes.....1 → K.10 No.....2

------------	-------------------------------------	--

Cookstove for baking (Injera)

This is typically used about 2 or 3 times per week.

For each household, determine whether the primary stove is traditional three-stone stove or nothing (based on responses in Section I). Then, randomly assign one of the following improved stoves for baking:

- To traditional three-stone stove user we ask the WTP for (1) biomass improved stove (Mirt) available in the local market.*

Of course, if the household already has an improved biomass stove or electric stove, please skip this question.

(After a type of improved cookstove is randomly chosen, price of this type of cookstove will be assigned based on one of the three percentages of the reference price: 33%, 66% or 100%.)

K.10	CAPI/ Enumerator: Recall responses to Section I (USE OF COOKING AND BAKING SOLUTIONS) from the type column and record the main stove used for baking: three-stone/traditional, <i>Mirt</i> improved, electric/LPG (in this last case skip to the next section). Read options aloud	HH uses three-stone/traditional stove.....6 HH uses biomass improved stove (<i>Mirt</i>)7→L HH uses electric/LPG stove (<i>Mitad</i>)8→L HH does not use any stove for baking.....9→L
